"2 WHEELS DRIVE" METERCOUNTER

DESCRIPTION

This device allows to detect the perfect linear speed on cables and tubes production lines.

The two wheels of the meter counter are kinematically connected to each other, and lean on the product remaining balanced thanks to a pneumatic piston with variable pressure. This guarantees a certain grip on the cable.

The wheels of the meter counter are mod. "Free Pulley®", which free the strand / cable to turn on its longitudinal axis.

The rollers in contact can be of different materials, such as rubber, resin and steel.

The meter counter is equipped with a balancer for the two wheels, a pneumatic piston and a "reaction" support for pneumatic piston and line encoder.
