## FORMING DEVICE FOR TAPES

### DESCRIPTION

The forming device with forming lances is composed of a welded and painted structure that supports two guides for positioning the formers and supporting the lances.

The shelves are useful for resting the lances waiting to be used.

The 39NiCrMo3 former allows you to work on the desired range of tapes. It's composed of two cones, external and internal, with a central passage hole for the cable to be wrapped. A finger positioned at the exit of the former will accompany the tape towards the forming lance.

The forming lances in 39NiCrMo3 will be dedicated to your cable diameters.

They can accompany the tape and the cable up to the inside of the extrusion head, to prevent the tape from coming loose before the sheath.
