CAPSTAN “CAB 200 F”

The capstan is a device that, put in line with wire and cables during the unwinding, allows to equalize the tensions on products. The braking system is “disk separation” type with adjustable pneumatic reaction. This system guarantees a constant braking and a game of cushioning during starting and braking ramps of the line.

The braking element has a very long duration.

As for the double capstan, put in series, it will allow to do the sum of the tensions in series.
